

**Customization needed-  
perfect solution found**

**Grippers, Membranes or screw connections for  
machine and equipment construction**

**Finethread**

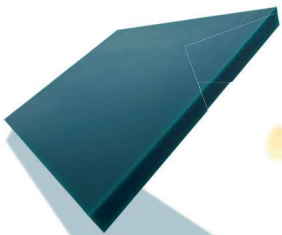

**Seals of all kinds**

**Buffers and Dampers for all applications**

**Standard parts in all hardnesses**

In addition to standard parts, Veith also produces special parts in all batch sizes. Here we benefit from our many years of experience and specially developed machining options.

Eladur was originally developed for use as a spring element in toolmaking. However, due to the many advantages of the material, Eladur was quickly used for other applications such as equipment and mechanical engineering. Eladur has proven itself under the most difficult conditions and has withstood high load changes without signs of fatigue. Thanks to its impact-absorbing characteristics, Eladur is also perfectly suited as a buffer and damping element. Over the years, further shore hardnesses have been developed to suit even more applications, for example in the sealing and medical industries. Our food-safe materials complete the portfolio.
