- IT** Tutti i cilindri Special Springs sono dotati di riserva corsa da 1 a 3 mm (escluso M90/TBM-TBI-TEM). Quindi il valore nominale Cu è completamente utilizzabile. Si raccomanda comunque di prevedere una riserva corsa addizionale pari al 10% della corsa nominale o 5mm per corse superiori a 50mm per prevenire eventuali extra-corse che potrebbero verificarsi, e causare danni irreparabili ai cilindri e gravi rischi per la sicurezza.

- EN** All Special Springs gas springs are designed with a stroke reserve from 1 to 3 mm (except M90/TBM-TBI-TEM). Thus, the nominal value Cu is fully applicable. However, it is recommended to keep a stroke reserve of 10% of the nominal stroke or 5 mm for strokes longer than 50 mm, in order to avoid the risk of any over stroke possibly causing damages to things and/or injury to people.

- DE** Alle Gasdruckfedern von Special Springs verfügen über eine Hubreserve von 1 bis 3 mm (Ausnahme M90/TBM-TBI-TEM). Daher kann der Nennwert Cu 100% verwendet werden. Es wird jedoch empfohlen, eine zusätzliche Hubreserve von 10% des Nennhubs bzw. 5 mm bei Hübren über 50 mm einzuhalten, um die Gefahr eines Überhubs zu vermeiden, die mögliche irreparable Beschädigungen- und/oder Personenschäden verursachen können.

- FR** Tous les ressorts gaz Special Springs sont conçus avec une réserve de course de 1 à 3 mm (sauf M90/TBM-TBI-TEM). Ainsi, la valeur nominale Cu est pleinement applicable. Cependant, il est recommandé de conserver une réserve de course de 10% de la course nominale ou de 5 mm pour les courses supérieures à 50 mm, afin d'éviter le risque d'une éventuelle course supplémentaire qui pourrait causer des dommages matériels et/ou corporels.

- ES** Todos los cilindros de gas SPECIAL SPRINGS están dotados de una reserva de carrera de 1 a 3 mm (excepto M90 / TBM-TBI-TEM). Por lo tanto el valor nominal Cu es completamente utilizable. De todos modos, se recomienda proporcionar una reserva de carrera adicional igual al 10% de la carrera nominal o 5 mm para carreras superiores a 50 mm para evitar cualquier sobre carrera que pudiera causar daños a cosas y/o lesiones a personas.

- PT** Todos os cilindros da Special Springs são projetados com uma reserva de curso de 1 a 3mm (exceto os modelos M90/TBM-TBI-TEM). O que permite a utilização de 100% do curso nominal do cilindro. No entanto, recomenda-se manter uma reserva de 10% do curso nominal ou 5mm para cilindros com curso superior a 50mm, para evitar o risco de sobre curso, que possa causar danos aos cilindros ou até pessoas.

Wenn SKUDO nicht eingesetzt werden kann, empfehlen wir, die Gasdruckfeder mit nach unten stehendem Kolben zu montieren, um das Eindringen der Flüssigkeit oder der Schmutzpartikel in die Gasdruckfeder zu vermeiden.

F_{1i}
isothermal
end force

IT Nel catalogo per tutti i modelli sono indicate sia la forza finale isoterma che politropica.

La forza finale isoterma con 100% Cu è il valore della forza calcolato in condizioni statiche.

La forza finale politropica con 100% Cu è un valore più realistico da considerare quando il cilindro ad azoto è in funzione. Proprio per questo, va calcolata caso per caso, perché soggetta a variazioni della temperatura del gas dipendenti da corsa nominale, corsa di lavoro, velocità della pressa, no. dei cicli al minuto, volume del gas, temperatura dell'ambiente e di lavoro etc.

Special Springs, a titolo informativo, indica anche i valori approssimati di forza politropica calcolati a regime termico, 100% Cu, 30 SPM, velocità pressa costante e temperatura ambiente 20°C. Per maggiori informazioni contattare Special Springs.

EN Both the isothermal and polytropic end forces are indicated in the catalog for all models.

The isothermal end force at 100% Cu is a value calculated in static conditions.

The polytropic end force, at 100% Cu is a more realistic value consider when the gas spring is working. The polytropic force changes case-by-case, since it is subject to variations in the gas temperature depending on the nominal stroke, working stroke, press speed, number of cycles per minute (SPM), volume of gas, room temperature etc.

For user information, Special Springs, indicates the approximated values of polytropic force calculated at thermal regime, 100% Cu, ca 30 SPM constant press speed and room temperature at around 20°C. For further details please contact Special Springs.

DE In unserem Katalog ist für alle Gasdruckfedern sowohl die isotherme als auch die polytrope Endkraft angegeben.

Die isotherme Endkraft bei 100% Cu ist ein Wert, der unter beinahe statischen Bedingungen ermittelt worden ist.

Die polytrope Endkraft bei 100% Cu ist ein realistischerer Wert, wenn die Gasdruckfeder in Betrieb ist. Aus diesem Grund ändert sich die polytrope Kraft von Fall zu Fall, da sie Schwankungen der Gastemperatur in Abhängigkeit von Nennhub, Arbeitshub, Pressengeschwindigkeit, Hubzahl pro Minute (SPM), Gasmenge, Raumtemperatur etc. unterliegt.

Special Springs gibt jedoch zur Information auch den annähernde Wert der polytropen Kraft an, der bei stabiler Betriebstemperatur, 100% Cu, ca. 30 Hübe pro Minute, konstanter Pressengeschwindigkeit und ca. 20° C Raumtemperatur ermittelt worden ist. Für weitere Informationen wenden Sie sich bitte direkt an Special Springs.

F_{1p}
Polytropic
end force

FR Pour tous les modèles, on indique sur le catalogue, soit la force finale isothermique, que celle polytrophique.

La force finale isotherme, avec 100% Cu, est une valeur calculée sur des conditions statiques.

La force finale polytrophique, avec 100% Cu, est une valeur plus réaliste à considérer lorsque le ressort à gaz fonctionne. La force polytrophique change au cas par cas, car elle est soumise aux variations de la température du gaz en fonction de la course nominale, de la course de travail, de la vitesse de la presse, du nombre de cycles par minute, du volume de gaz, de la température ambiante, etc.

Special Springs, cependant, à des buts d'information, indique aussi les valeurs approximés de la force polytrophique calculés au régime thermique, 100% Cu, environ. 30 SPM, presse à vitesse constante et température ambiante 20 °C. Pour tous renseignements complémentaires, contactez Special Springs.

ES Para todos los modelos se indican en el catálogo tanto la fuerza final isotérmica como la politrópica.

La fuerza final isotérmica con 100% de Cu es el valor de fuerza calculado en condiciones estáticas.

La fuerza final politrópica con 100% de Cu es un valor más realista que se debe considerar cuando el cilindro está en funcionamiento. Por esta razón esta fuerza se calcula para cada caso particular ya que está sujeta a variaciones de la temperatura del gas que dependen de la carrera nominal, carrera de trabajo, velocidad de la prensa, número de ciclos por minuto, volumen de gas, temperatura ambiente y de trabajo, etc

Special Springs sin embargo, a título informativo, indica los valores aproximados de fuerza politrópica calculados a régimen térmico, 100% Cu, 30 ciclos/minuto, velocidad constante de prensa y temperatura ambiente de 20 °C. Para más información póngase en contacto con Special Springs.

PT Para todos os modelos, é indicada no catálogo tanto a força final isotérmica, que a politrópica.

A Força Final Isotérmica considerando 100% do curso, é um valor calculado teórico.

A Força Final Politrópica considerando 100% do curso, é um valor mais realista para ser considerado em condições de trabalho. A Força Politrópica irá mudar caso a caso, pois esta sujeita a variações de temperatura do gas dependendo do curso nominal, curso de trabalho, velocidade da prensa, munerios de golpes por minuto, volume do gas, temperatura ambiente, etc...

Special Springs, no entanto, para fins de informação, indica os valores aproximados da força politrópica calculados a regime térmico 100% Cu, ca. 30 SPM, velocidade constante de prensas e temperatura ambiente a. 20 °C. Para mais informações contacte Special Springs.

IT TUTTI i cilindri ad azoto SPECIAL SPRINGS soddisfano i requisiti previsti dalla Direttiva Europea sulle attrezzature a pressione 2014/68/EU, che si applica nell'Unione Europea dal 19 Luglio 2016. Questa Direttiva regola e definisce come attrezzature a pressione i recipienti, le tubazioni e gli accessori sottoposti a una pressione massima ammissibile PS superiore a 0,5 bar. Più specificatamente, la Direttiva 2014/68/EU prevede la classificazione in categorie e l'obbligo di marcatura CE con il numero identificativo del produttore per le attrezzature il cui risultato della pressione P (bar) x il volume del fluido V_o (dm³) sia pari o superiore a 50. La marcatura CE è obbligatoria per le Categorie II e III, ma facoltativa per la Categoria I. Per tutti i cilindri ad azoto il cui prodotto $P \times V_o$ è inferiore a 50 si applica l'Articolo 4.3 della Direttiva e non sono marcati CE.

EN ALL Special Springs gas springs fulfill the requirements of the European directive concerning pressure equipment (2014/68/EU), applied in the European Union from 19th July 2016. This directive sets out the standards for pressure equipment and defines them as vessels, piping and accessories subject to a maximum allowable pressure PS greater than 0,5 bar. In particular, according to the directive 2014/68/EU, pressure equipments are classified by category and they shall bear the CE marking with the identification number of the manufacturer when the result of pressure P (bar) X fluid volume V_o (dm³) is 50 or more. The CE marking is mandatory for Categories II and III, but discretionary for Category I. All gas springs which result of $P \times V_o$ is less than 50 are subject to Article 4.3 of the same directive and they do not bear the CE marking.

DE Alle Stickstoff-Gasdruckfedern von Special Springs erfüllen die Anforderungen der ab dem 19. Juli 2016 in der Europäischen Union anzuwendenden Richtlinie 2014/68/EU über die Druckgeräte. Diese Richtlinie legt die Anforderungen an die Druckgeräte fest und definiert diese als Behälter, Rohrleitungen und Ausrüstungsteile mit einem max. zulässigen inneren Überdruck (PS) von mehr als 0,5 bar. Im Einzelnen werden Druckgeräte gemäß der Richtlinie 2014/68/EU in Kategorien eingestuft und müssen mit der CE-Kennzeichnung und der Identifikationsnummer des Herstellers beschriftet werden, wenn der errechnete Wert des Produktes von Druck (P) multipliziert mit dem Befüllungsvolumen V_o (dm³) größer als 50 ist. Die CE-Kennzeichnung ist für die Kategorien II und III zwingend, jedoch nicht für die Kategorie I. Die Gasdruckfedern, bei denen der errechnete Wert des Produktes von Druck (P) multipliziert mit dem Befüllungsvolumen V_o (dm³) kleiner als 50 ist, tragen gemäß dem Artikel 4.3 der genannten Richtlinie keine CE-Kennzeichnung.

FR TOUS les cylindres-ressorts à l'azote de SPECIAL SPRINGS satisfont aux prescriptions de la Directive Européenne sur les équipements sous pression 2014/68/EU, qui s'applique dans l'Union Européenne depuis le 19 juillet 2016. Cette Directive fixe les exigences envers les équipements sous pression et les définit comme les réceptacles, les tuyauteries et les accessoires soumis à une pression maximale admissible PS supérieure à 0,5 bar. Plus spécifiquement, la Directive 2014/68/EU prévoit la classification en catégories et l'obligation du marquage CE avec le numéro d'identification du fabricant pour les équipements dont le résultat de la pression P (bar) X le volume du fluide V_o (dm³) est de 50 ou plus. Le marquage CE est obligatoire pour les catégories II et III, mais facultatif pour la catégorie I. Tous les cylindres-ressorts à l'azote dont le produit de $P \times V_o$ est moins de 50 sont réglementés par l'article 4.3 de la même directive et ne portent pas le marquage CE.

ES TODOS los cilindros de nitrógeno SPECIAL SPRINGS cumplen con los requerimientos de la Directiva Europea sobre equipos a presión 2014/68/EU, que se aplica en toda la Unión Europea a partir del 19 de julio de 2016. Esta Directiva regula y define como equipos a presión los recipientes, mangueras y accesorios sometidos a una presión máxima admisible PS superior a 0,5 bar. Más concretamente, la directiva 2014/68/EU prevé la clasificación en categorías y la obligación de marcado CE con el número identificativo del fabricante para los equipos cuyo resultado de la presión P (bar) x el volumen del fluido V_o (dm³) sea igual o superior a 50. El marcado CE es obligatorio para las categorías II y III, pero facultativa para la categoría I. Todos los cilindros de nitrógeno cuyo resultado $P \times V_o$ es inferior a 50 están sujetos al artículo 4.3 de la directiva y no llevan el marcado CE.

PT TODOS os cilindros de nitrogénio Special Springs satisfazem os requisitos da Diretiva Europeia para equipamentos sob pressão 2014/68/EU, que se aplica na União Europeia a partir de 19 de julho de 2016. Esa Diretiva regula os equipamentos sob pressão e os define como os recipientes, os tubagens e os acessórios sujeitos a uma pressão máxima admissível PS superior a 0,5 bar. Em particular, a directiva 2014/68/EU prevê a classificação em categorias e a obrigação da marcação CE com o número de identificação do fabricante para os equipamentos cujo o resultado de pressão P (bar) X volume fluido V_o (dm³) é igual ou superior a 50. A marcação CE é obrigatória para as categorias II e III, mas discricionária para a categoria I. Todos os cilindros de nitrogénio, através da qual resultam $P \times V_o$ é inferior a 50 estão sujeitos ao artigo 4.3 da mesma directiva e não ostentam a marcação CE.

LIFE WARRANTY

IT Qualora, dopo un lungo funzionamento o per applicazioni particolarmente gravose, si verificassero delle perdite di pressione, significa che le tenute hanno iniziato ad usurarsi o sono state danneggiate. E' quindi possibile, con l'uso di appositi utensili e kits ed il supporto di specifici video e dettagliate istruzioni, ripristinare le condizioni originarie di tenuta e guida. La manutenzione deve essere eseguita solamente da personale qualificato. Eventuali errori possono essere causa di gravi rischi per la sicurezza o limitare la durata dei cilindri. Prima di eseguire qualsiasi intervento scaricare completamente la pressione e assicurare che lo stelo sia completamente compresso nel corpo.

EN If pressure losses occur after extended use or particularly heavy applications, this indicates that the sealing gaskets are worn or damaged. Using special tools and kits, and with the support of videos and detailed instructions, it is possible to restore the original seal and guide conditions. Maintenance must only be conducted by qualified personnel. Errors would cause serious injury or reduce the working life of the gas springs. Before carrying out any work on the system, fully exhaust all pressure and ensure that the rod is fully retracted into the body.

DE Wird nach langer Betriebstätigkeit oder besonders beanspruchender Verwendung ein Druckverlust festgestellt, bedeutet dies, dass die Dichtungen allmählich abgenutzt sind oder beschädigt wurden. Es ist mit Hilfe von zweckmäßigem Werkzeug oder Sets sowie spezifischen Videos und detaillierten Anweisungen möglich, die Ausgangsbedingungen von Dichtung und Führung wiederherzustellen. Die Wartung sollte nur von qualifiziertem Personal vorgenommen werden. Etwaige Fehler können schwerwiegende Sicherheitsrisiken hervorrufen oder die Lebensdauer der Zylinder einschränken. Entladen Sie den Druck und stellen Sie sicher, dass die Kolbenstange komplett in den Zylinderkörper eingeführt ist, bevor Sie Eingriffe vornehmen.

FR Si des pertes de pression se produisent après un long fonctionnement ou avec des applications particulièrement lourdes, cela signifie que les joints de rétenu ont commencé à s'user ou qu'ils sont endommagés. L'utilisation d'outils et de kits appropriés, ainsi que le support de vidéos spécifiques et d'instructions détaillées permettront de rétablir les conditions d'origine de rétenu et de guidage. La maintenance doit être effectuée uniquement par du personnel qualifié. Les éventuelles erreurs peuvent engendrer de graves risques pour la sécurité ou limiter la durée de vie des cylindres. Avant d'effectuer toute opération, décharger complètement la pression et s'assurer que la tige soit complètement comprimée dans le corps.

ES Si después de un largo funcionamiento o en caso de aplicaciones especialmente difíciles se produjesen pérdidas de presión, podría deberse a que los retenes han comenzado a desgastarse o han sufrido algún desperfecto. En esos casos es perfectamente posible restablecer las condiciones originales de los retenes o del guiado mediante kits de mantenimiento adecuados y videos con instrucciones específicas. El mantenimiento debe ser efectuado única y exclusivamente por personal cualificado. Cualquier error podría causar graves riesgos de seguridad o limitar la vida útil de los cilindros. Antes de cualquier reparación, descargar completamente la presión y asegurarse de que el vástago quede completamente comprimido dentro del cuerpo.

PT Depois de muito tempo de utilização dos cilindros, ou trabalhando em condições severas, os cilindros podem apresentar perda de pressão, isto significa que os elementos vedantes começaram a se desgastar ou estão danificados. Neste caso é possível fazer a troca dos elementos vedantes, mas só deve ser feito com a utilização dos instrumentos e ferramentas corretas, auxílio de videos de treinamento e manual de instrução. A manutenção só deve ser feita por pessoal qualificado. A manutenção incorreta dos cilindros pode causar graves riscos de operação e limitar a vida útil dos cilindros. Antes de executar qualquer intervenção nos cilindros, assegurar que os cilindros estão completamente descarregados.

Design recommendations

IT Per una facile progettazione e per ridurre i costi di produzione seguire le linee guida di cui sotto

- ① • Per collegare il pannello usare, se possibile, i canali del gas esistenti.
• In alternativa collegare il pannello con tubi e raccordi.
- ② • Resilienza materiale piastra alla temperatura minima di utilizzo $\geq 27\text{J}$.
• Allungamento a rottura del materiale piastra $\geq 14\%$.
- ③ • Evitare interferenza tra i fori di fissaggio dei cilindri e i canali del gas.
• Selezionare cilindri con corse maggiori per aumentare il volume del sistema.
- ④ • Realizzare canali passanti e pulire adeguatamente.
• Evitare canali ciechi.

EN For easier design and manufacturing cost-saving follow the guide lines below

- ① • When possible, use the existing gas ports to link the panel.
• Alternatively, link the panel by using hoses and connections.
- ② • Resilience of the plate material at minimum operating temperature $\geq 27\text{J}$.
• Elongation at break of plate material $\geq 14\%$.
- ③ • Avoid interference between the gas spring's fixing holes and the gas ports.
• Select gas springs with higher stroke to increase the volume of the system.
- ④ • Machine thru-holes and adequately clear the ports.
• Avoid blind channels.

DE Für eine leichter von staten gehende Entwicklung und um Produktionskosten zu sparen, befolgen Sie die Richtlinien unten.

- ① • Die Kontrollarmatur, wenn möglich, an den vorhandenen Tieflochbohrungen anbringen.
• Alternativ kann die Druckkontrollarmatur mit Schlauchkomponenten angeschlossen werden.
- ② • Zähigkeit des Plattenmaterials bei minimaler Betriebstemperatur $\geq 27\text{J}$.
• Bruchdehnung des Plattenmaterials $\geq 14\%$.
- ③ • Überschneidungen zwischen der Lage der Zylinder-Befestigungslöchern und den Gaskanälen sind zu vermeiden.
• Um das Volumen des Systems zu vergrößern, wählen Sie Gasdruckfedern mit dem nächst größeren Hub.
- ④ • Die Durchgangsbohrungen sauber fertigen
• Blinde Kanäle vermeiden.

FR Pour une conception plus facile et de l'épargne des coûts de fabrications suivez les instructions ci-dessous

- ① • Pour relier le panneau utiliser, si possible, les canaux du gaz existents.
• Alternativement, joindre le panneau en utilisant des tubes et des raccords.
- ② • Résilience du matériau de la plaque à la température minimale de fonctionnement $\geq 27\text{J}$.
• Allongement à la rupture du matériau de la plaque $\geq 14\%$.
- ③ • Eviter l'interférence entre les trous de fixation des ressorts et les canaux du gaz.
• Sélectionner des ressorts avec des courses majeures pour augmenter le volume du système.
- ④ • Réaliser des trous débouchants et nettoyez correctement.
• Eviter les trous sans issue.

ES Para facilitar el diseño y poder reducir costes de producción se recomienda seguir las instrucciones indicadas a continuación

- ① • En la medida de lo posible usar los canales de gas existentes para conectar el panel.
• Como alternativa, conectar el panel con tuberías y racores.
- ② • Resiliencia del material de la placa a la temperatura mínima de uso $\geq 27\text{J}$.
• Alargamiento a la rotura del material de la placa $\geq 14\%$.
- ③ • Evitar la interferencia entre los orificios de fijación de los cilindros y los canales de gas.
• Seleccionar cilindros con mayores carreras para aumentar el volumen del sistema.
- ④ • Mecanizar agujeros pasantes en la placa y limpiar adecuadamente.
• Evitar agujeros ciegos.

PT Para facilitar o desenho e economizar custos de produção seguir as orientações abaixo mencionados

- ① • Para ligar o painel, se possível, usar os canais de gás existentes.
• Em alternativa conecte o painel com tubos e acessórios.
- ② • Placa com resistencia mínima a temperatura mínima de $> 27\text{J}$.
• Alongamento de ruptura do material da placa $\geq 14\%$.
- ③ • Evitar a interferência entre os orifícios de fixação dos cilindros e os canais de gás.
• Escolher os cilindros com curso mais grande para aumentar o volume do sistema.
- ④ • Realizar orifícios de passagem par toda a placa e bem limpar.
• Evitar orifícios sem saída.

How to plug plate holes

IT Quando è richiesta una riduzione della forza del sistema, o del numero di cilindri, è possibile tappare i fori non utilizzati con una copertura dotata di guarnizione, che utilizza gli stessi fissaggi dei cilindri.

EN When a reduction either of the system's force, or of the number of gas springs, is required, it is possible to plug the holes which are not used, with a cover provided with a square seal, through the same fixing hoses of the gas springs.

DE Wenn die Systemkraft oder die Anzahl der Zylinder reduziert werden soll, können nicht benötigte Bohrungen mit einem Stöpsel verschlossen und abgedichtet werden, der die selben Befestigungen wie die Zylinder benutzt.

FR Quand une réduction de la force du système ou du nombre des vérins est requise, on peut boucher les trous qui ne sont pas utilisés, avec un couverture équipée avec un joint, qui utilise les mêmes trous de fixations des vérins.

ES Cuando se requiere de una reducción de la fuerza del sistema o del número de cilindros, se pueden tapar los alojamientos no utilizados con una tapa equipada con retenes que tiene los mismos agujeros de fijación que los cilindros.

PT Quando você solicita uma redução na força do sistema, ou o número de cilindros, pode tapar os buracos não utilizados com uma tampa com vedação, que usa o mesmo buracos dos cilindros.

IT VANTAGGI

- Pressione uguale in tutti i cilindri
- Controllo della pressione = controllo della forza
- Aumento/riduzione della pressione = aumento/riduzione della forza attraverso il pannello di controllo (regolazione possibile anche con il sistema in lavoro, senza intervento diretto sui cilindri)
- Utilizzo di polmoni di compensazione per un ridotto incremento della pressione a fine compressione
- Gestione di impianti e forze diverse nello stesso stampo (uso multipannello MCPC+AUMCP)
- Stop di sicurezza con uso pressostato
- Utilizzo tappo di sicurezza con disco di rottura CE
- Flessibilità di collegamento con tubi e raccordi EO - 24°, JIC 37°, FlexFlow, Micro 32°, ORFS

I cilindri collegabili a sistema (codice modello + N/NA) sono forniti privi di valvola unidirezionale e con corpo/fondello speciale dove previsto. Per le serie S/SC/H/KE/RV/RS/RF/RG/RT/LS/ML/HT è possibile trasformare i cilindri autonomi in cilindri collegabili a sistema semplicemente rimuovendo i dispositivi di tenuta dal foro di caricamento. Scaricare completamente la pressione prima di questa operazione. Qualora si rendesse necessario rimuovere uno qualsiasi dei componenti installati, scaricare completamente la pressione attraverso il pannello.

EN BENEFITS

- Same pressure in all gas springs
- Pressure control = force control
- Pressure increase/decrease = force increase/decrease through the control panel (the adjustment is also possible with the system running, without direct intervention on the cylinders)
- Lower pressure increase by using compensation tank
- Possibility to manage different systems and forces in the same tool by using the multipanel
- MCPC+AUMCP
- Safe stop function through pressure switch
- Use of the safety plug with rupture disc CE
- Flexible linking by using hose and connection EO - 24°, JIC 37°, FlexFlow, Micro 32°, ORFS and couplings and many useful accessories

The hoses system gas springs (model code + N/NA) are supplied without charging valve and with special body/end plate when specified. However S/SC/H/KE/RV/RS/RF/RG/RT/LS/ML/HT series can be converted from self-contained to hoses system by simply removing the charging valve. Be sure that all pressure is exhausted before starting this operation. In case it's necessary to remove any of the installed components, pressure must be fully exhausted through the control panel.

DE VORTEILE

- Identischer Druck in allen Zylindern
- Druckkontrolle = Kraftkontrolle
- Druck erhöhen/mindern = Kraft erhöhen/mindern über das Bedienfeld (Einstellung auch beim laufenden System möglich, ohne direkten Eingriff in die Zylinder)
- Einsatz von Ausgleichbehältern zur Reduzierung von Druckerhöhungen
- Verwaltung verschiedenartiger Anlagen und Leistungen in demselben Werkzeug über die Multisteuerung MCPC+AUMCP
- Sicherheitsstopp per Druckwächter
- Verwendung eines Sicherheitsverschlusses mit Berstscheibe (CE-Kennzeichnung)
- Flexibilität bei der Verbindung mit Rohren und Anschlüssen EO - 24°, JIC 37°, FlexFlow, Micro 32°, ORFS

Zylinder im Verbund (Modellcode + N/NA) werden ohne Einwegventile und, sofern vorgesehen, mit speziellem Gehäuse/Boden geliefert. Für die Serien S/SC/H/KE/RV/RS/RF/RG/RT/LS/ML/HT können die autonomen arbeitenden Zylinder im Verbund im Verbund abgeändert werden, indem die Dichtungsvorrichtungen an der Luftzufuhröffnung entfernt werden. Lassen Sie die Druckluft vor diesem Arbeitsschritt komplett ab. Falls es sich als notwendig erweisen sollte, einen der installierten Komponenten zu entfernen, muss vorher die Druckluft mittels der Steuerung vollständig abgelassen werden.

FR AVANTAGES

- La même pression dans tous les ressorts
- Contrôle de la pression = contrôle de la force
- Augmentation/diminution de la pression = augmentation/diminution de la force depuis le panneau de control (le réglage est possible même si le système est en fonction, sans intervention directe sur les vérins)
- Utilisation de réservoirs de compensation produisant une petite augmentation de la pression à la fin de la compression
- Gestion d'installations et de forces différentes sur le même outil (utilisation multi-panneaux MCPC+AUMCP)
- Arrêt de sécurité à l'aide d'un pressostat
- Utilisation d'un bouchon de sécurité avec disque de rupture CE
- Souplesse du raccordement à l'aide de tubes et de raccords EO - 24°, JIC 37°, FlexFlow, Micro 32°, ORFS

Les ressorts pouvant être reliés à un système (référence modèle + N/NA) sont livrés sans la vanne unidirectionnelle et avec corps/fond spécial si prévu. Pour les séries S/SC/H/KE/RV/RS/RF/RG/RT/LS/ML/HT, il est possible de transformer les ressorts autonomes en cylindres pouvant être reliés à un système en ôtant simplement les dispositifs d'étanchéité du trou de chargement. Décharger complètement la pression avant d'effectuer cette opération. S'il est nécessaire de démonter un des composants installés, décharger complètement la pression par l'intermédiaire du panneau de contrôle.

ES VENTAJAS

- Misma presión en todos los cilindros
- Control de la presión = control de la fuerza
- Aumento/disminución de la presión = aumento/disminución de la fuerza a través del panel de control (regulación posible incluso con el sistema en marcha, sin intervención directa en los cilindros)
- Pueden emplearse pulmones de compensación para reducir el aumento de la presión al final de la compresión
- Gestión de instalaciones y fuerzas distintas en el mismo útil (con uso del multipanel MCPC+AUMCP)
- Parada de emergencia con uso de presostato
- Tapón de seguridad con disco de ruptura CE
- Flexibilidad de conexión con tubos y racores EO - 24°, JIC 37°, FlexFlow, Micro 32°, ORFS

Los cilindros conectables (código modelo + N/NA) se suministran sin válvula unidireccional y con cuerpo/base especiales en los casos en que así se requiera. En las series S/SC/H/KE/RV/RS/RF/RG/RT/LS/ML/HT, los cilindros autónomos pueden transformarse en cilindros conectables simplemente quitando los dispositivos de estanqueidad del orificio de carga. Antes de realizar esta operación, vaciar completamente la presión. Si fuera necesario quitar alguno de los componentes instalados, vaciar completamente la presión mediante el panel de control.

PT VANTAGENS

- Pressão igual em todos os cilindros
- Controlo da pressão = controlo da força
- Aumento/Redução da pressão = Aumento/Redução da força através do painel de controle (É possível regular, inclusive, com o sistema trabalhando, sem nenhuma intervenção nos cilindros)
- Utilização dos tanques de compensação para redução do aumento da pressão no final da compressão
- Gestão de instalações e de várias forças na mesma Ferramenta (uso do multi-painel MCPC+AUMCP)
- Stop de segurança com utilização do pressostato
- Utilização de Bujão de segurança com disco de rotura CE
- Flexibilidade de ligação com tubos e ligações EO - 24°, JIC 37°, FlexFlow, Micro 32°, ORFS

Os cilindros ligáveis em sistema (código do modelo + N/NA) são fornecidos sem válvula unidireccional e com corpo/extremidade especial. Para a série S/SC/H/KE/RV/RS/RF/RG/RT/LS/ML/HT, é possível transformar os cilindros autónomos em cilindros ligáveis em sistema, bastando remover os dispositivos de retenção do orifício de carga. Descarregar completamente a pressão antes desta operação. No caso de ser necessário remover um dos componentes instalados, descarregar completamente a pressão através do painel de controlo.

IT Nel modo di funzionamento non autonomo i cilindri possono essere collegati ad un polmone di compensazione esterno. Lo scopo principale è contenere l'aumento di pressione nel sistema entro limiti prefissati e minori rispetto al normale incremento dato dalla compressione degli steli-pistoni. La determinazione del volume di compensazione richiesto è facilmente calcolabile applicando la seguente formula:

$$V_p = n \cdot \{[S \cdot x \cdot R / (R-1)] - V_0\}$$

V_p = volume del polmone [cm³]

n = numero di cilindri componenti il sistema

S = sezione dello stelo (pistone per serie KE)
di ogni singolo cilindro [cm²]

x = corsa effettiva di lavoro [cm]

R = rapporto tra pressione finale ed iniziale del sistema [max 1,4]

V_0 = volume iniziale di ogni singolo cilindro [cm³]

Esempio:

Forza richiesta ~6000 daN ed $R=1,1$ (10%). Si scelgono n. 4 SC1500-50 (oppure n. 2 SC3000-50) Il volume richiesto è di circa 1300 cm³ e quindi la scelta sarà per il polmone tipo PC-3. Un eventuale maggior volume del polmone non è un problema. Inoltre possono essere collegati tra loro più polmoni di compensazione per ottenere volumi più prossimi a quelli richiesti

EN Gas cylinders operating in non self-contained mode may be connected to a compensation tank. The principal aim is to limit the pressure within the system to a lower figure than would normally be obtained with standard compression rates. The compensation tank volume may be easily found using the following formula:

$$V_p = n \cdot \{[S \cdot x \cdot R / (R-1)] - V_0\}$$

V_p = compensation volume [cm³]

n = no. of gas cylinders required.

S = Area of rod (piston for series KE) in [cm²]

x = effective working stroke in [cm]

R = Ratio between final required pressure and initial pressure of the system [max 1,4]

V_0 = Initial volume of each cylinder in [cm³]

Example:

Force required ~6000 daN and $R = 1,1$ (10%). No. of cylinders = 4 Type SC1500-50 (or 2 Type SC3000-50). The compensation volume required is approximately 1300 cm³. Therefore, the compensation tank required will be type PC-3. Extra volume in the tank is generally not a problem, and to obtain more accurate volume, extra tanks may be connected in the system

DE Im gesteuerten, nicht-autonomen Funktionsmodus können die Zylinder an einen Ausgleichspeicher angeschlossen werden. Hauptzweck ist es, den Druckaufbau im System innerhalb der vorgegebenen Grenzwerte und unterhalb der normalen Zunahme durch den Druck der Kolbenstangen zu halten. Die Bestimmung des notwendigen Ausgleichvolumens kann mit folgender Formel leicht errechnet werden:

$$V_p = n \cdot \{[S \cdot x \cdot R / (R-1)] - V_0\}$$

V_p = Speichervolumen [cm³]

n = Anzahl der Zylinder im System

S = Stangenquerschnitt (Kolben für Serie KE)
jedes einzelnen Zylinders [cm²]

x = tatsächlicher Arbeitshub [cm]

R = Verhältnis zwischen Anfangs- und Enddruck des Systems [max 1,4]

V_0 = Anfangsvolumen jedes einzelnen Zylinders [cm³]

Beispiel:

Benötigte Kraft ca. 6000 daN, $R = 1,1$ (10%) Nr. 4 SC1500-50 (oder Nr. 2 SC3000-50) Das benötigte Volumen beträgt ca. 1300 cm³, die Wahl des Speichers fällt daher auf den Typ PC-3. Auch ein eventuelles höheres Speicher volumen stellt kein Problem dar. Außerdem können mehrere Ausgleichspeicher aneinander geschlossen werden, um die benötigten Volumina zu erhalten

FR Dans le mode de fonctionnement non autonome, les vérins peuvent être reliés à un réservoir de compensation. L'objectif principal est de contenir l'élévation de la pression, dans le système, dans les limites préétablies et inférieures par rapport à l'augmentation normale provoquée par la compression des tiges-pistons. La détermination du volume de compensation requis se calcule facilement en utilisant la formule suivante:

$$V_p = n \cdot \{[S \cdot x \cdot R / (R-1)] - V_0\}$$

V_p = volume du réservoir [cm³]

n = nombre de vérins composant le système

S = section de la tige (piston pour série KE)
de chaque vérin [cm²]

x = course réelle de travail [cm]

R = rapport entre pression finale et initiale du système [max 1,4]

V_0 = volume initial de chaque vérin [cm³]

Exemple:

Force requise env. 6000 daN et $R = 1,1$ (10%) 4 SC1500-50 (ou bien 2 SC3000-50) Le volume requis est d'environ 1300 cm³ et le choix se portera donc sur le réservoir de type PC-3. A noter qu'un plus grand volume éventuel du réservoir ne représente pas un problème. De plus, les réservoirs peuvent être couplés pour obtenir les volumes voisinant ceux requis.

ES Los cilindros de gas en funcionamiento no autónomo pueden conectarse a un pulmón de compensación. El objetivo principal es limitar la presión del sistema, reduciéndola a un valor menor que el que normalmente se obtendría con tasas de compresión standard. El volumen del pulmón de compensación puede calcularse fácilmente mediante la siguiente fórmula:

$$V_p = n \cdot \{ [S \cdot x \cdot R / (R-1)] - V_0 \}$$

V_p = volumen de compensación [cm³]

n = nº de cilindros de gas existentes en el sistema.

S = Área del vástago (pistón en la serie KE) de cada cilindro en [cm²]

x = carrera efectiva en [cm]

R = Cociente entre la presión final necesaria y la presión inicial del sistema [max 1,4]

V_0 = Volumen inicial de cada cilindro en [cm³]

Ejemplo:

Fuerza necesaria ~6000 daN y $R = 1,1$ (10%).

Nº de cilindros = 4 Tipo SC1500-50 (ó 2 Tipo SC3000-50). El volumen de compensación necesario es de aproximadamente 1300 cm³.

Por lo tanto, el pulmón de compensación será del tipo PC-3. Por lo general, un pulmón con volumen extra no constituye problema. Para obtener un volumen más exacto, puede ser necesario conectar más pulmones al sistema

PT Os cilindros de gás que operam em modo não autónomo podem ser ligados a um depósito de compensação. O principal objectivo é limitar o aumento de pressão dentro do sistema a um valor inferior ao que se obteria normalmente com taxas de compressão normalizadas. O volume do depósito de compensação pode ser facilmente determinado utilizando a fórmula seguinte:

$$V_p = n \cdot \{ [S \cdot x \cdot R / (R-1)] - V_0 \}$$

V_p = volume de compensação [cm³]

n = nº de cilindros de gás necessários.

S = Área do embolo (pistão para a série KE) em [cm²]

x = curso de trabalho efectivo em [cm]

R = Relação entre a pressão final requerida e a pressão inicial do sistema [max 1,4]

V_0 = Volume inicial de cada cilindro em [cm³]

Exemplo:

Força requerida ~6000 daN e $R = 1,1$ (10%).

Nº de cilindros = 4 Tipo SC1500-50 (ou 2 Tipo SC3000-50). O volume de compensação requerido é de aproximadamente 1300 cm³. Logo, o depósito de compensação requerido é do tipo PC-3. O volume suplementar no depósito não é geralmente um problema e, para obter um volume mais preciso, podem ser ligados ao sistema depósitos suplementares
